

# SpacePole SpaceServ™

## Space saving self-service technology mounting

The newest member of the SpacePole family is SpaceServ, a feature rich space saving self-service mounting system that addresses an increasing need in the marketplace for technology independent solutions for a range of self-scanning and self-checkout operations.

The main unit shown is the basket and bagging version for self checkout environments, however the modularity of SpaceServ

makes it suitable for multiple self-service applications, such as stand alone kiosk info points or wall mounted pay stations.

Designed for use with the SpacePole range of products, the unit has a small footprint, making it ideal for the convenience sector where space is traditionally at a premium. Modular and easy to install, it is the ideal solutions for a range of customer operated in-store operations.
